“Intracellular Bacteria in Placental Basal Plate are Localized to Extravillous Trophoblasts”. 2014. Placenta. Cao B. and Mysorekar IU

Congratulations Caihong Wang!

The following paper has been published:

Congratulations Erin Reinl!
Erin won The School of Medicine’s 10th Annual Art Show.

Her work:

“The Great Lakes”
News of the Week

Congratulations Dr. Sarah England!

The NIH/NICHD has just released an announcement for pre-solicitations for proposals under The Newborn Screening Saves Lives Act, which coordinates and expands research in newborn screening under the auspice of the Hunter Kelly Newborn Screening Research Program. This was developed by Sarah England, when she was a Health Policy Fellow with Senator Hillary Rodham Clinton.

The primary goals of this program are to 1. Identify, develop and test promising new screening technologies; 2. Increase the specificity of newborn screening; 3. Expand the number of conditions for which screening tests are available; and 4. Develop experimental treatments and diseases management strategies for additional newborn conditions and other genetic, metabolic, hormonal and or functional conditions that can be detected through newborn screening for which treatment is not yet available.
Congratulations Brian Debosch!

The following paper has been published:

Congratulations Ramon Lorca!

The following paper has been published:

Congratulations Emily Benesh, PhD!

Emily’s poster won First Place at The Postdoc Symposium:

“Maternal High Fat diet induces prostate hyperplasia in offspring through post-translational inhibition of the Pten signaling cascade”
